

Z-BEST ORGANIC MULCH

Z-best Organic Mulch is made from composted wood overs. This material has been through a 9-16 week composting process and is then screened to desired sizing. During the composting period, accepted thermophilic composting procedures are performed to accomplish pathogen reduction through time and temperature 130-170 degrees (F) for over 120 days. This ensures a thoroughly composted and weed free product. These woods are processed through our horizontal grinder, and then are sent through a screen where they are reduced to 1 - 3" in size. Organic Mulch is an excellent ground cover product that greatly enhances the aesthetic appearance of landscapes. When placed around plants, mulch can help retain moisture, control weeds, and help prevent erosion. In addition, this composted mulch is less combustible than other mulches. Composted mulch is also recommended for use in Bioretention Facilities.

FREMONT – HIGHWAY RESTORATION
